PROFESSIONAL SUMMARY

Computer Science graduate focused on building software systems and data-driven applications. Experience spans full-stack development, data analysis, and applied machine learning, with an emphasis on turning data into usable insights and functional tools. Comfortable working across technical and cross-functional environments, particularly in roles at the intersection of software engineering, data, and product thinking.

EDUCATION

Toronto Metropolitan University	October 2026
Master of Science in Computer Science (AI Specialization)	Toronto, ON
York University	June 2025
Bachelor of Science in Computer Science	Toronto, ON

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Data & Analytics: Pandas, NumPy, Power BI

Frameworks & APIs: Spring Boot, Node.js

Machine Learning: Scikit-learn, TensorFlow, PyTorch

PROJECTS

Machine Learning & Data Science

Loan Default Prediction Dashboard	March 2026
- Developed a dashboard to assess loan default risk and support financial decision-making - Cleaned and transformed financial datasets using Python (Pandas, NumPy) for modeling and analysis - Built and evaluated predictive models using scikit-learn, ROC-AUC, recall, and F1-score - Translated model results into actionable insights for identifying high-risk loan segments	

CNN Gleason Image Classifier	November 2025
- Developed a CNN image classification system using PyTorch to identify Gleason grades from histopathology slides - Built end-to-end machine learning pipelines in Python to support data preprocessing, training, and evaluation - Conducted experimentation across model configurations to evaluate performance trade-offs - Documented findings and system design decisions to support transparency and reproducibility	

Software Development

PIAS Games (E-commerce Website)	December 2024
- Built a full-stack e-commerce platform for a game store, enabling customer transactions and admin management - Build REST APIs (Spring Boot) for user authentication, product management, and order processing - Developed SQL-based data persistence to manage users, product inventory, and transaction records - Documented system workflows to improve maintainability	

Nutrifit	September 2023
- Designed and developed a health management application to help users track and manage fitness-related data - Developed backend functionality using Java and SQL to handle user data, activity tracking, and application logic - Integrated frontend and backend systems through APIs to enable real-time communication and user interaction - Contributed to database design and implemented data validation to ensure accuracy and consistency of user data	

EXPERIENCE

Maple Downs Golf & Country Club Server & Team Trainer Maple, ON	2018 - Present
- Led onboarding of new staff during high-volume events, ensuring consistent service standards - Managed real-time prioritization and issue resolution in fast-paced, client-facing environments - Coordinated with team members to maintain smooth service delivery and strong customer experience under pressure
